Summary

Final-year B.Tech student in CSE (AI & ML) with hands-on experience building end-to-end AI applications, including a credit risk prediction system and a multi-disease prediction healthcare platform. Skilled in Python, React, and MongoDB, with a strong foundation in data structures and algorithms. Seeking an SDE (Software Development Engineer) role.

Skills

Languages: Python, JavaScript, HTML, CSS
AI/ML: Scikit-learn, XGBoost, LightGBM
Frontend & Backend: React.js, FastAPI
Databases: SQL, MongoDB
Data Tools: Pandas, NumPy, Matplotlib
Core CS: Data Structures and Algorithms
Tools & Cloud: Git, GitHub, VSCode

Education

Malla Reddy College of Engineering & Technology	2023 – 2027
B.Tech in Computer Science and Engineering (AI & ML)	CGPA: 8.0

Projects

CreditPathAI – Credit Risk Prediction System	Python, XGBoost, LightGBM, FastAPI, React.js
- Built an ML app to predict loan default risk from borrower financial data (income, loan amount, employment history). - Compared Logistic Regression, XGBoost, and LightGBM models; achieved 91% ROC-AUC with LightGBM. - Built FastAPI REST APIs with a React.js frontend and a risk-based recommendation engine (Approve/Monitor/Reject).	

Multi Disease Prediction System	Python, Django, MongoDB
- Built an ML healthcare app to predict Diabetes, Heart Disease, Parkinson’s Disease, and Skin Diseases. - Used Decision Tree, Random Forest, and SVM models for symptom-based and image-based prediction. - Built the web app with Django and MongoDB, including a Health Advice Engine for personalized suggestions.	

Achievements

- Led a team to build an AI solution shortlisted among internship projects.
- Best Participation award, Smart India Hackathon (SIH), college level.
- Gained hands-on experience with AI agents at Agentathon Hyderabad.

Certifications

- Problem Solving Using Python Programming – CodeTantra
- Machine Learning with ChatGPT: Image Classification Model – Coursera Project Network
